

Setting Up Application Environment

DOCKER CLI INSTALLATION

Step 1:

Go the official Docker website:

<https://docs.docker.com/desktop/install/windows-install/>

The screenshot shows the Docker Desktop installation page for Windows. The browser address bar displays `docs.docker.com/desktop/install/windows-install/`. The page features a blue header with navigation links: Home, Guides, Manuals, Reference, Samples, and Contribute. A search bar is also present. On the left, a sidebar lists various topics, with 'Install on Windows' highlighted. The main content area is titled 'Install on Windows' and includes a section for 'Docker Desktop terms' stating that commercial use requires a paid subscription. Below this, a welcome message introduces the page's purpose. A prominent blue button labeled 'Download Docker Desktop for Windows' is provided, with a link to 'Docker Desktop for Windows' underneath. A note mentions that checksums can be found in the 'Release notes'. The right sidebar contains 'Page details' (7 minutes read, edit, request changes), 'Tags' (windows, install, download, run, docker, local, Docker Desktop), and a 'Contents' table of contents listing topics like system requirements, WSL 2 backend, Hyper-V, and installation methods. A 'Give feedback' button is located on the far right.

Give feedback

Step 2:

Click that button (Docker Desktop for Windows) and download will start and it takes few minutes to complete.

Step 3:

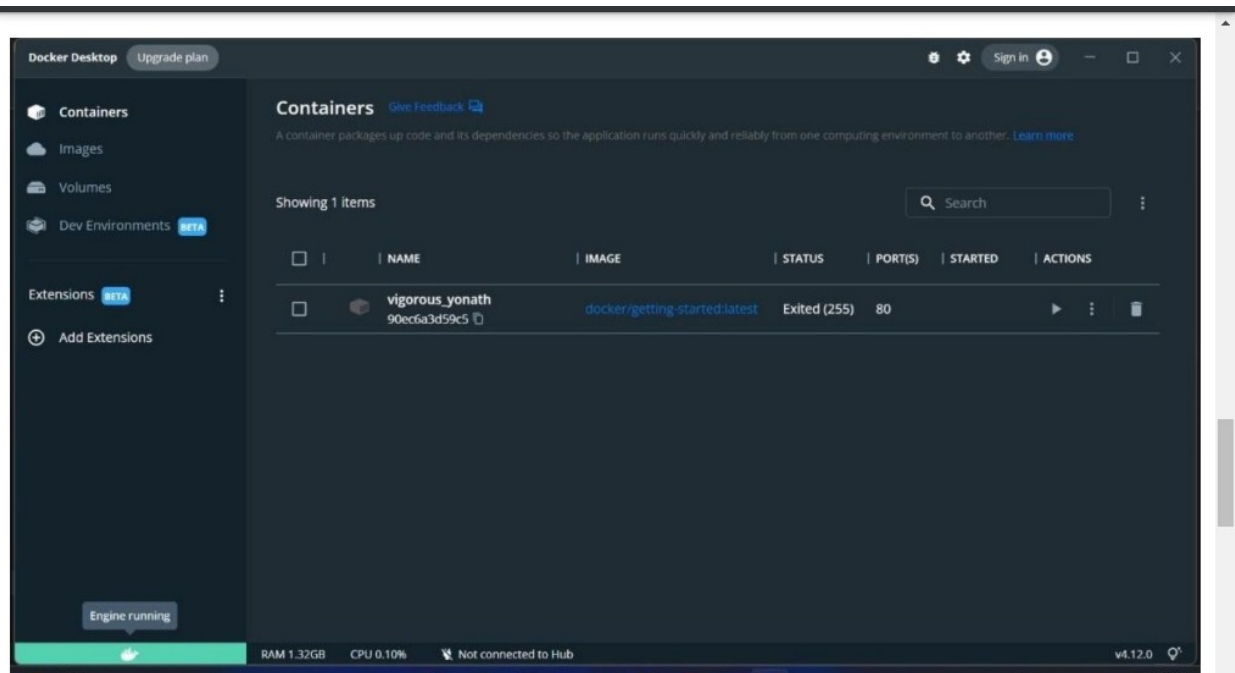

Go to downloads in browser (or) type ctrl + J, it will navigate to download page and double-click the particular docker file.

Step 4:

Now Installation is complete. This icon was added in your desktop. Double-click the icon to start the docker app, you can register and login that app to access those credentials.

Step 5:

Docker will start correctly, the left bottom side was shown in green color, docker will show the status of docker app working successfully.

Step 6:

Finally, the docker is installed successfully.
